

Do you want to join a team with a mission to become the number one choice within digital healthcare services? We are looking for an experienced Test Automation Engineer who wants to contribute to our transformation journey.

### **About the position**

As a Test Automation Engineer, you will belong to one of our three agile and cross-functional development teams. The team consists of 6-7 persons and you will work together with a product owner and several developers. The team has the end-2-end responsibility for both the core Task Management functionality of our platform Aurora teleQ and the integrations with MRS and other types of systems. Our system is mainly written in Java and Angular.

### **Who are you?**

As a person, we believe that you have good leadership abilities and a strategic mindset. You also have a great ability to communicate with other people and strive to share your knowledge and test results with your colleagues. You have a proactive and ambitious attitude and are passionate about developing new and better solutions.

To succeed in these roles, we believe that you have several years of experience working as Test Automation Engineer in a cross-functional agile product team developing SaaS services.

### **We believe that you have:**

- Experience in working with system test automation of both GUI and APIs
- Experience with incorporating automated tests in CI/CD pipelines
- Experience in working with load tests of large distributed systems
- As well as experience in working with manual exploration tests
- Fluency in English, oral and written

### **We also expect you to have some of these requirements:**

- Experience of working with Robot Framework
- Knowledge in Python, Linux, MongoDB, PostgreSQL etc.
- Large distributed systems and microservice architecture. You will work with our cloud-based systems that handle large amounts of traffic every day.
- Hands-on experience with modern Cloud technologies
- Experience in working with API management & Security
- Speaks and reads Swedish, or other languages.

*At Aurora Innovation, we believe that we are on the face of the earth to solve the communication needs between patients and healthcare, for the benefit of society. We hope to share the same passion with you!*

### **About Aurora Innovation**

Aurora Innovation helps healthcare to increase its availability to patients. Our company improves the work environment of health care professionals, who manage an unscheduled flow of incoming contact requests via telephony and other digital entrances. Our product Aurora teleQ has redefined the way patients reach health care. With offices in Sweden, Finland, Holland and Spain, we are one of the leading companies in our field with the

ambition of becoming the number one choice within digital healthcare communication services in all of Europe.

Many of our employees are notably proud of the value we deliver to health care and the close contact with our customers and users which we strive to maintain. We encourage each other to behave respectfully, constructively, professionally and kindly, and the corporate values that guide us are solidarity, courage and simplicity.

**Send in your application today!**

Interviews will be held continuously, so apply today! If you have any questions, please contact Henrik Westerberg at [henrik.westerberg@aurorainnovation.com](mailto:henrik.westerberg@aurorainnovation.com)
